EDUCATION

M.Sc. Cybersecurity 10.2025 – Present

Brandenburg University of Technology, Cottbus, Germany

- Relevant coursework: Cryptography, IT Security Law, Network and System Security, Wireless and Sensor Networks, Secure Cyber-Physical Systems.

B.Sc. Computer Science 09.2021 – 01.2025

Constructor University, Bremen, Germany

- Minor in Economics and Resource Management.
- Bachelor thesis (Computer Vision/ML): built a real-time video pipeline at 30 FPS combining object tracking (SORT) with a deep re-identification model in Python and PyTorch, improving tracking F1-score from 0.75 to 0.80.

PROFESSIONAL EXPERIENCE

Business Intelligence Intern 07.2023 – 05.2025

Rajab Advocates (Remote)

- Cut manual data-processing time by 30% by automating reporting workflows in Python (pandas) and advanced Excel.
- Delivered real-time visibility into operational and compliance KPIs by designing and maintaining 25+ Power BI dashboards built from multiple raw data sources.

Student Assistant – Admissions & CRM 09.2023 – 06.2024

Constructor University Bremen (Bremen)

- Maintained GDPR-compliant data integrity across 300+ student records, eliminating duplicate entries, by implementing data verification and deduplication processes in Salesforce CRM.
- Analyzed prospective-student engagement and enrollment data to identify outreach opportunities, translating insights into targeted marketing and promotional campaigns that attracted prospective students.

Student Assistant – Library 09.2023 – 08.2024

Constructor University Bremen (Bremen)

- Conducted research on resource utilization, contributing to a 15% improvement in library efficiency.
- Analyzed circulation data using advanced analytics tools to support strategic decision-making.

Logistics Intern 06.2023 – 08.2023

Honold LTS North GmbH (Bremen)

- Optimized warehouse operations by applying Lean Management principles, reducing process times and eliminating waste by 15%.
- Used the company's existing SAP system to identify and reduce process bottlenecks affecting the AKL machine that supplied wing parts for Airbus.
- Planned and sequenced daily task schedules across warehouse operations, coordinating with team members and supervisors to keep deliverables on track.

Data Analyst Intern 12.2022 – 02.2023

CIMBRIA (Nairobi, Kenya)

- Visualized revenue forecasts, cost patterns, and profitability projections to support financial decisions.
- Created visually appealing and interactive dashboards using Power BI for key business metrics insights.

PROJECTS

Personal Portfolio Website (Vercel) 05.2026 – 07.2026

- Designed and built a personal website, hosted on Vercel, presenting a detailed, in-depth summary of who I am, my background, and my work.

SecureScope – Virtual Network Security Monitor (Wazuh, Linux) 04.2026 – Present

- Deploying and tuning a Wazuh SIEM instance across a segmented virtual network of two hosts to monitor security events in real time.

- Simulating brute-force login attacks to test detection rules and validate alerting thresholds.
- Identified and prioritized remediation for 4 vulnerabilities using CVSS severity scoring.
- Compiling structured vulnerability and incident reports aligned to NIS2 guidelines for stakeholder review.
- Configuring log collection, correlation rules, and dashboards to improve visibility into overall network security posture.

Cryptography & Password Analytics Tool *(Python, Streamlit)*

04.2026 – 05.2026

- Analyzed password strength across 14M+ samples from the RockYou dataset, measured by Shannon entropy, via a Python/Streamlit visualization tool.
- Demonstrated real-world crackability of weak passwords, measured by time-to-crack, by simulating dictionary and rainbow-table attacks.

Football Match Outcome Prediction Engine *(Python, pandas, scikit-learn)*

10.2025 – 07.2026

- Engineered ~150 predictive features per match from historical results, expected-goals (xG), and Elo ratings for the recently concluded domestic season, via a time-aware data pipeline.
- Produced calibrated match-outcome probabilities from a stacked machine-learning ensemble, validated with walk-forward testing to prevent data leakage; iterating on the model ahead of the next season.
- Adapted the same feature-engineering and stacked-ensemble pipeline to the recently concluded World Cup, achieving 62.5% accuracy in selecting the winning team across tournament fixtures.

Crediborn – Climate Finance & Carbon Credit Platform (Frontend)

06.2025 – 09.2025

- Built the frontend web interface for a climate finance platform concept designed to connect corporations with verified smallholder farming projects.
- Coordinated with a co-founder to present the platform concept at a sustainability talk in the UK, translating the product vision into stakeholder-facing pitches.

Celestial Bodies Database *(PostgreSQL)*

03.2025 – 05.2025

- Designed and built a relational database containing tables for stars, planets, and moons, implementing primary and foreign key constraints.
- Wrote complex SQL queries utilizing joins, filtering, and aggregation to retrieve and structure celestial data.

Rental Website *(HTML, CSS)*

09.2023 – 11.2023

- Developed a European rental service website streamlining tourist access to car, jet ski, and Airbnb rentals for an ideal vacation experience.

StagChat – Mobile Learning App *(Android)*

03.2019 – 06.2021

- Co-created and published StagChat, an Android app on the Google Play Store, to help bridge the education quality gap in rural areas.
- Enabled smartphone users in rural communities to access free, quality educational content, improving learning access for underserved users.

SKILLS

Analytics & BI: Power BI, SQL (PostgreSQL), Advanced Excel, Data Modeling, ETL Pipelines, Data Cleansing, Salesforce CRM.

Programming & Systems: Python, C/C++, Bash, Docker, Linux/Windows CLI, Virtualization (VMware/VirtualBox), Microsoft Applications.

Security & Compliance: Wazuh SIEM, Threat Detection, Vulnerability Assessment (CVSS), OWASP Top 10, Nmap, Wireshark, GDPR Compliance.
